

PRESS RELEASE

Leverage Enhances Information Security Website

Woodinville, Wash., Nov. 19 - Leverage Information Systems today announced it has enhanced its INFOSEC Services section on its website at <http://infosec.leverageis.com> with an improved security assessment tool, an expanded library covering a wide range of information security topics, and added case studies describing successful implementations of INFOSEC solutions.

Information technology (IT) professionals looking to strengthen their system and network security will find the Security Assessment Tool especially helpful. The Security Assessment, a series of 10 self-administered questions covering a wide range of security-related information management practices and systems, helps Website visitors identify areas that may need attention to meet both regulations and to ensure a better understanding of how to protect data throughout their organization.

The results of the assessment should be viewed as an initial indicator of the security readiness of an enterprise. IT administrators should also recognize to fully protect a system requires an in-depth assessment that identifies security weaknesses, formulates a series of recommendations to address those weaknesses, and provides suggestions for ways to improve IT security overall. The online security assessment only addresses the potential risks in a handful of standard enterprise areas.

INFOSEC Services has also expanded its library of informative articles on security-related issues. These articles range from

the importance of information security to tools used to evaluate network security. Be sure to check back often as the library is updated.

Finally, INFOSEC Services has added case studies to its website that describe some of the challenges customers are facing and how INFOSEC Services' solutions are helping these customers meet their operational and security goals.

Look for additional enhancements to the INFOSEC Services section of our Website in the near future.

For more information on protecting IT systems against unauthorized access to or modification of data, whether in storage or transit, call an INFOSEC Services consultant at 800.825.6680.
