

Leverage Information Systems Provides Secure, Optimize Data Services for Government Agencies, Contractors on Amazon Web Services GovCloud (US)

Woodinville, WA – Leverage Information Systems has joined the Amazon Web Services (AWS) Solution Provider Program and is introducing its cloud expertise in leading customers to their eventual evolutionary or revolutionary path to the cloud. With the launch of [AWS GovCloud \(US\) Region](#), this provides Leverage Information Systems an initial foray in bringing the advantages of the cloud to the U.S. Government market.

“It’s no secret that Government customers are having their budgets reduced and the president has mandated that data centers will be reduced by 40 percent. This is the ideal environment for our customers to migrate to cloud computing,” said Douglas Chesler, president and CEO, Leverage Information Systems.

“I.T. is the perfect area to offload the lion’s share of enterprise data traffic, such as administrative and e-mail traffic. Maintenance of hardware, software updates, security patches, real estate, power, cooling are among the least considered areas of cost savings, but in aggregate, they are profound. AWS GovCloud (US) enables us to offer the ability to transform what in the past would have been considered cost-centers,” he added.

Leverage’s U.S. Government experience runs the gamut from U.S.-only to levels well above top secret. The company’s reputation presents significant advantage when competing for secure communications work.

Leverage Information Systems provides a secure approach in migrating to the cloud, initially with a hybrid model but with a path forward to a cloud-hosted solution. Because of the security requirements of our Government and national security customers, Leverage Information Systems will work on behalf of their customers to identify their most sensitive data requirements and provide them the best solution approach from a combination of resources available from on-premise systems and AWS GovCloud (US).

As an Amazon Web Services Solution Provider, Leverage Information Systems is experienced in both AWS Commercial Cloud Regions and AWS GovCloud (US), enabling the company to address the needs of enterprises of all sizes, security requirements, operational requirements and the flexibility as well as cost-savings associated with cloud computing.

Leverage Information Systems is a leading Solution Provider and Network Systems Integrator that provides mission-critical secure information systems. The company supports some of the most secure, most sophisticated networks in the United States, including those for National Intelligence, Defense and Public Safety, State & Local Governments and major agencies, departments and institutions that that require always-on, high-performance networks with iron-clad security.
