

Federal Network Services Earns Cisco Advanced Security Designation

Woodinville, Wash., Nov. 17 -- Federal Network Services, a leader in unified communications, information security, and network integration, today announced it has achieved the Cisco Systems® Advanced Security Specialization designation. The designation means Federal Network Services customers will have access to a wide range of Cisco based security solutions provided by a company recognized for its knowledge and depth of experience in information security.

In earning the Advanced Security Specialization designation Federal Network Services has been recognized for its knowledge and expertise in selling, designing, installing, and supporting comprehensive, integrated Cisco network security solutions.

“Earning the Advanced Security Specialization designation reflects Federal Network Services’ level of expertise and our commitment to meeting the security needs of our Federal, state, local government, and commercial customers,” said Doug Chesler, president. “Combined with our comprehensive INFOSEC practice the Advanced Security Specialization demonstrates our commitment to helping customers meet their security requirements.”

The Advanced Security Specialization designation is the latest in a growing number of achievements recognized by Cisco. The company recently earned the Cisco Advanced Technology Partner (ATP) program Optical Metro Transport and Rich Media Communications designations by meeting demanding ATP partner program requirements, including rigorous training and demonstrating the company’s expertise in advanced technology program-specific technology and products.

In addition to these accomplishments, Federal Network Services successfully maintained its Cisco Customer Satisfaction Excellence ranking, the highest ranking of customer service satisfaction, during the most recent evaluation period. In earning the award the company maintained a track record of offering outstanding service throughout the pre-sale, installation, and post-sale cycle.

As a Cisco Channel Program partner Federal Network Services offers a full complement of pre-sales and post sales support services, including installation, onsite hardware repair and upgrades, broad troubleshooting expertise, Cisco products sales, configuration and upgrade support. Federal Network Services also offers a wide array of IP communications, networking and information security solutions to meet the current and future networking needs of customers.

About Federal Network Services, Inc.

Federal Network Services provides comprehensive IP communications networking solutions (supporting both product sales and services) and information security through engineering, operations, and maintenance management for technology integration and deployment services to Federal government and public sector customers under Federal mandates.
