Leverage Enhances Website with Information on Digital LED Signs

Woodinville, Wash., July 16 - Leverage Information Systems today announced it has launched a new section on its Website at www.leverageled.com featuring information on its extensive lineup of indoor and outdoor digital LED signs.

The site provides visitors with information focused on a large selection of indoor and outdoor LED display signs manufactured by Adaptive Micro Systems, Inc., a leading provider of LED signs. Visitors will also find information on integrating today's LED displays with existing signage and networking them as needed to allow for real-time control from a centralized location. Digital LED signs are typically used world-wide for dynamic general communication and on-premise advertising. They can be installed inside or outside of a building, at the entrance or throughout a campus or even on a roadside for billboard advertising.

"Enhancing our Website with information on our digital LED signs provides yet another way for our customers to become familiar with our wide range of digital LED signs," said Doug Chesler,

president and CEO. "Now, site visitors can learn about LED signs, select a sign model that can be manufactured to meet their requirement, and contact an experienced Leverage representative in their region for more information and begin the process of placing an order," he added.

Leverage's digital LED signs have been installed in thousands of locations throughout the U.S. and other countries and can be used at schools, churches, banks, auto dealerships, theaters, call centers, military posts, airports, hotels, retail stores or for any application requiring effective visual communications, or on-premise advertising to increase sales, promote safety, or present a professional image.

Look for additional enhancements to the Website in the near future including helpful information on how to select the right size sign, applications for indoor and outdoor display signs, and other information on effective advertising with LED display sign technology, including recommendations by the U.S. Small business Administration.

"Enhancing our Website with information on our digital LED signs provides yet another way for our customers to become familiar with our wide range of digital LED signs." – Doug Chesler, Leverage President and CEO
